wästberg

2024

The beginnings I grew up in Sweden with light, and lighting. My father ran a lighting company, and while I was initially determined not to follow in his footsteps, it didn't take long before I found myself working with him.

During our years together, our travels took us to all kinds of lighting environments. Even when they met every regulation and standard, I was struck by the fact that almost all of them felt harsh, unwelcoming, or just uncomfortable.

I came to understand that the good light cannot rely on measurable qualities alone. There are other immeasurable qualities that are equally essential. Qualities that speak to our human nature, our emotions and needs.

It was around this time that I came across a quote by Paul Klee, that resonated with me, expressing my own thoughts with simplicity and elegance. These words came to be central to my own lighting philosophy: "One eye sees, the other feels."

And so, in 2008, I started my own lighting company – Wästberg – and set out on my mission to create well-being through good light.

– Magnus Wästberg, founder and CEO

Introduction

Our aim is to create well-being through good light.

In close collaboration with leading architects and designers, Wästberg creates long-lasting, technologically driven, economically viable and environmentally conscious lighting. Lighting that answers to fundamental human needs, both physical and emotional, and adapts to these needs as they evolve and shift.

In our 2008 manifesto *Lamps for Neanderthal Man*, we pointed out man's primitive relationship to light in the form of fire. For more than a million years, fire was our only artificial light source. It frightened off wild animals, brought us together, kept us warm and made us feel safe. Above all, it gave us light that we could keep close, that we could control.

Electric light has been around for little more than a century – a blink of an eye in comparison with human evolution. Today, we find ourselves trying to tame our primitive needs to meet the demands of a modern, high-tech world, where light has more or less become a world of electronics. In our overly-lit spaces – created under the mistaken notion that more light equals greater productivity – we feel exposed, small, with nowhere to go.

We believe in creating modern-day fires. Light should shine for us, not on us.

We also believe in lighting that answers to fundamental human needs. The need to be able to see, read and write, but also to reflect, envision and imagine. The need to be a part of a dynamic social context, but also to be able to withdraw to a personal sphere of familiarity and safety.

Technology and innovation are at the heart of what we do and are crucial to providing good light. However, we understand that what's technically possible is not always humanly preferable. To us, true innovation means making the effort to find the best possible solutions, putting equal effort into both the measurable and the immeasurable.

Holocene

Holocene is our tribute to fire. Also to man. Together with leading architects and designers, we take a step backward in time, with the aim of restoring and recreating man's age-old relationship to campfires and candlelight. The Holocene family comprises seven different candleholders and oil lamps – each with its own unique, intimate approach to fire.

David Chipperfield

David Chipperfield founded David Chipperfield Architects in 1985. He has developed a design methodology that is now used across five offices in London, Berlin, Milan, Shanghai and Santiago de Compostela. In addition to design work, David Chipperfield has taught and lectured worldwide. In 2012 he curated the 13th International Architecture Exhibition of the Venice Biennale under the title Common Ground and he was the 2020 guest editor of Italian design magazine Domus. Among the accolades David Chipperfield has received are the Order of Merit of the Federal Republic of Germany and a knighthood for services to architecture. In 2011 he received the RIBA Royal Gold Medal for Architecture and in 2013 the Praemium Imperiale from the Japan Art Association. In 2021 David Chipperfield was appointed a member of the Order of the Companions of Honour and he was selected as the 2023 Laureate of The Pritzker Architecture Prize, in recognition of a lifetime's work.

The archetypal desk lamp revisited

Product: w102 Chipperfield

w102 Chipperfield references an archetypal personal desk lamp for home or office use, and seeks to offer a fresh interpretation of the familiar on a domestic scale.

Design: David Chipperfield, 2010

Features: Classic, solid materials
Sophisticated mechanics
Full-spectrum LED

An extended family

In 2020, the w102 Chipperfield desk lamp was joined by a wall lamp, a floor lamp and a surface-mounted pin version. Whether used on their own to light an individual space, or as a combined solution for a larger room, the different versions of w102 Chipperfield allow for flexible and easily adjusted lighting for any situation.

COB LED

The energy-efficient COB LED, in combination with a reflector and a diffuser, offers a qualitative warm white light that is evenly distributed without glare.

Classic, solid materials

w102 Chipperfield is available in a choice of solid brass or darkened steel, each crafted with high precision and special attention to the brushed finish.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Sophisticated mechanics

Like a fine clock, w102 Chipperfield has been carefully crafted down to the smallest mechanical detail. From the desk lamp's swivel base to the arm joint of the wall and floor lamp, clever engineering has resulted in a tactile and pleasing user experience; even the dimmer is a treat for the senses.

A portable beacon

Product: w241 Faro

On the one hand w241 Faro is a welcoming beacon, its gentle, low-sweeping glow emphasized by its formal integrity and balanced proportions. On the other, it is a technically superior hybrid lamp, pairing qualitative light with smooth, compact portability. Thanks to a carefully designed recharging solution – with no compromise on aesthetics, function, or performance – w241 Faro moves fluidly between various settings, from a dining table to an outdoor terrace.

Design: David Chipperfield, 2024

Features: Indoors, outdoors, anywhere
Low-sweeping glow
Seamless dimming
Group pairing function
High-quality, replaceable battery pack

Seamless dimming

The top disc is an integrated dimming wheel and switch, allowing for a seamless transition from bright, friendly light to a quieter, more intimate glow.

Low-sweeping glow

Despite w241 Faro's low, unassuming dimensions, its custom-developed lens solution delivers a generous sweep of even, glare-free illumination in any setting.

High-quality, replaceable battery pack

The high-performance battery pack has been carefully selected to meet our strict criteria in terms of overall quality, charging cycles, life span, environmental aspects, etc. It is easy to replace via the hatch on the bottom of the luminaire.

Simple recharging

Fully charged, w241 Faro's battery lasts for 7.5–20 hours, depending on the chosen light level. Once the power cord is attached, it then recharges within 4 hours. A colour-coded indicator on the bottom of the luminaire shows the remaining battery capacity at a glance.

Colours

Crafted from die-cast aluminum, w241 Faro comes in five painted colour coatings, as well as a tumbled raw aluminium finish (see below). The colour range originates from the little fisher boats in the small harbour of Corrubedo in Spain. The harbour is home to David Chipperfield's Bar do Porto, which features the same colour palette.

Group pairing function

The w241 Faro remote control (accessory) can be used to control up to 25 lamps – switching them on or off, setting them at pre-selected light levels, or seamlessly dimming them up or down.

Raw

w241 Faro is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Indoors, outdoors, anywhere

A highly capable indoor lamp – yet portable when you need it to be. w241 Faro's aesthetics and hybrid performance are designed to impress, both with and without a power cord. Its IP54 rating means it is dust and water resistant, making it an ideal companion in garden and patio settings.

Technical warmth

Product: w222 Focal

Highly professional, yet anything but impersonal – w222 Focal has been created to not only deliver exceptional focal light, but also to enrich its surroundings with a design that is both clearly architectonic and warmly appealing. It cleverly merges the square and circle into an archetypal whole that feels familiar but also interesting. With its understated grace and simple installation, w222 Focal effortlessly adapts to all kinds of spaces and aesthetics.

Design: David Chipperfield, 2022

Features: Focal illumination
Mounted with a simple click
Highly versatile

Focal illumination

The optic lens of w222 Focal has been specifically developed to take focal illumination to a whole new level. Put on a full-spectrum COB LED, it creates a clearly defined light that is with $UGR \leq 19$ (unified glare rating) remarkably rich and crisp.

Raw

w222 Focal is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Highly versatile

In addition to the main ceiling-mounted version, w222 Focal can be wall-mounted, suspended or recessed – allowing for a wide variety of solutions. Its subtlety and refined lines make it an ideal complement to a wide range of settings.

Mounted with a simple click

w222 Focal is comprised of two distinct, intersecting bodies – one containing the light source, the other a mounting bracket. Once the bracket is attached to the wall or ceiling, the shade can be smoothly clicked into place.

Understated grace

w222 Focal's aesthetics are designed to enhance without necessarily being noticed – and to be appreciated by those who do notice them. Its balanced fusion of a square and a circle creates a shape that is architectonic and competent, yet still warm and human.

Track compatible

w222 Focal's pendant suspension is compatible with all major light track systems. (see accessories page 408).

A timeless unity of light and form

Product: w202 Halo

Once an everyday object synonymous with light, the classic light bulb's universally symbolic status is fading. With w202 Halo, its archetypal form is not only revived, but given new light and life. Its design serves as an homage to the light bulb, recreating its timeless unity of light and form.

Design: David Chipperfield, 2020

Features: Three different glass shades
Mouth-blown opal glass
Full-spectrum LED

Mouth-blown opal glass

Both bulb and shade are made of mouth-blown white opal glass, by skilled craftsmen.

COB LED

A built-in COB LED provides a modern, energy-efficient light solution with a long life expectancy and high-quality dimmable light.

Three different glass shades

The w202 Halo family includes three types of conical shades, each with its own distinct characteristic light.

Comfortable light

w202 Halo provides a pleasant, warm white, dimmable light. Its bulb and shade work together to create a gentle downward-directed light as well as a beautiful luminous glow of atmospheric light.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Product: Holocene No. 2: David Chipperfield

While the sleek brass of Holocene No. 2 serves as a nod to the classic oil lamp, its construction offers a more innovative, interactive take. Along the perimeter of its round base – where the lamp oil is stored – are two freely movable curved reflectors. Their matte brushed exteriors are contrasted by the inside surfaces, which are polished to a mirror finish. Once the off-centre wick is lit, fascinating reflections and counter-reflections are created. Both protected and enhanced by the brass reflectors, the flame's light is allowed to play over its surroundings – an intriguing, infinitely variable dance between shadow and light.

Product: Holocene No. 5: David Chipperfield

Holocene No. 5 explores the play of reflections, as well as the idea of a simple piece that can be used in different ways. It uses the age-old trick of combining a sconce with a mirror to increase the reflection of light – here in a striking version that is both contemporary and timeless enough for any setting. While entirely crafted from stainless steel, its wall bracket and candleholder are coated with a rich, deep shade of red oxide, creating a bold contrast to the highly polished surface of the wall mirror. The holder can also be removed and used on its own, or with a matching candlestick for added height.

Design: David Chipperfield, 2022

Claesson
Koivisto Rune

The Swedish architects and designers Mårten Claesson, Eero Koivisto and Ola Rune opened their studio in Stockholm, in 1995. Commissions for the practice include The Inde/ Jacobs Gallery in Texas, K5 Hotel in Tokyo, Zander K Hotel in Bergen, Sfera Building in Kyoto, The Administrative Service Centre in Novy Sanzhary, Ukraine and a number of private houses in Sweden and abroad. Their architectural work has been exhibited at the Venice Architecture Biennale. As designers they work with Arflex, Artifort, Boffi, Capdell, Cappellini, Fontana Arte, Kasthall, Living Divani, Orrefors, Paola Lenti, Studio TK, Swedese, Tacchini and Time & Style amongst others. Their designs have won awards including Designer of the Year 2011 and 2014 by Elle Décor Italia, Red Dot “Best of the Best” 2013 and 2014, The Bruno Mathsson Prize 2015 and Interior Designer of the Year by Elle Deco Japan 2021. In 2021, King of Sweden Carl XVI Gustaf presented them with The Prince Eugen Medal for outstanding artistic achievement in architecture (2020).

A suspended spotlight

Product: w131 Bell

While w131 Bell may be small in size, it's big on versatility, character and light. A great solo player, as well as perfect in clusters.

Design: Claesson Koivisto Rune, 2013

Features: Materials that ring true
10 colours
Anywhere, any space

Materials that ring true

w131 Bell's gently rounded shade is made of solid, die-cast aluminium – adding a certain authenticity, weight and stability seldom found in small pendant lamps.

Anywhere, any space

Performing equally well at home and in public spaces, w131 Bell is a pleasure to work with. Use it as a solitary piece to light up a single table, or in colourful clusters above larger surfaces; to add a jolt of life and colour, or as a discreet background accent.

10 Colours

Available in 10 colours, each shade is suspended by a matching textile cord for further visual emphasis.

Track compatible

Compatible with all major light track systems (see accessories page 408).

A choice of two colour temperatures

The light is available in two different colour temperatures – 2700 K or 3000 K.

2700 K
 3000 K

Product:

Light on a grand scale

w151 Extra large pendant

With its exaggerated dimensions, w151 Extra large pendant boldly rejects today's reductivism while bringing back the pendant lamp's room-shaping qualities. Its three super-sized shades combine scale, geometry and high-quality light in one grand gesture.

Design:

Claesson Koivisto Rune, 2015

Features:

Scaled up, pared down
A shaper of rooms
Capable illumination

A shaper of rooms

Aside from providing light, lamps – and pendant lamps in particular – play an important role of adding definition and physical presence to a room. Suspended from the ceiling, they shape the light, creating rooms within rooms. w151 Extra large pendant reinstates this role, defining the space it inhabits – an office, a home, a hotel lounge – with comfortable, directed light.

Raw

w151 Extra large pendant is available in a brushed raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Scaled up, pared down

Based on the most basic of geometrical shapes – the cone – w151 Extra large pendant comes in three variations, ranging from tall and narrow to low and wide. All three are super-sized – pushing the limits of manufactured spun aluminium – yet able to fit through a standard doorframe. To keep the silhouette sleek and clean, while carrying the weight of the metal shades, a Kevlar reinforcement is integrated into the cord.

Approaching the surreal

Despite its size, w151 Extra large pendant is surprisingly thin, yet equally strong. Paired with carefully planned details and the soft, papery matte finish, the result is illusory – almost otherworldly – when experienced. In 2024 we introduce an additional brushed raw aluminium finish.

A choice of two colour temperatures

The light is available in two different colour temperatures – 2700 K or 3000 K.

2700 K
3000 K

Capable illumination

Much effort has been made to ensure that w151 Extra large pendant's light is as impressive as its size, and capable of playing a central role in a large room. A high-quality SMD LED solution is used to create an even spread of warm white light.

All-round but by no means ordinary

Product: w221 Medium pendant

With their starkly reduced silhouettes, exaggerated dimensions and beautiful light, the w151 Extra large pendant and w201 Extra small pendant never fail to impress. The scope of these elemental, archetypal conical forms is further broadened with w221 Medium pendant – specifically tailored to situations where its predecessors are too large or too small.

Whether suspended above a dining area or a conference table, its perfectly balanced presence echoes the lightness and precision seen in its siblings. Carefully and expertly illuminating any space it finds itself in, w221 Medium pendant can be trusted to create a welcoming atmosphere and a heightened spatial experience.

Design: Claesson Koivisto Rune, 2022

Features: All-round
Well-balanced light
Solo or in constellations

All-round

While perhaps not as immediately eye-catching as its large and small counterparts, w221 Medium pendant is nevertheless quick to prove itself as a versatile pendant light. It effortlessly lends its distinctive aesthetics to a wide range of settings and situations, providing both office and home environments with well-defined, comfortable light.

Well-balanced light

The sleek purity of w221 Medium pendant is reflected in the light it produces: beautifully even, and effective without being overpowering. A high-quality SMD LED solution is used to create an even spread of dimmable, warm white light.

Track compatible

Compatible with all major light track systems (see accessories page 408).

Solo or in constellations

Each of the three cone variations – artfully crafted in spun aluminium – makes a bold, clear statement on its own. Together, they allow for all kinds of creative arrangements: strict or playful, symmetrical or dynamic, but always with integrity and poise.

Raw

w221 Medium pendant is available in a brushed raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Product: A scaled-down statement
w201 Extra small pendant

w201 Extra small pendant echoes our w151 Extra large pendant in being all about scale. In this case, we asked ourselves: How small can the pendant lamp become, without compromising on light performance or the integrity of its three distinctive cone shapes? In contrast to the grand gesture of its super-sized sibling, w201 Extra small pendant makes a different statement: smaller and more intimate, but no less important.

Design: Claesson Koivisto Rune, 2020

Features: Solid material
Small in size, big on light
Full-spectrum LED

Solitary or grouped

Each of w201 Extra small pendant's three conical shades – ranging from tall and narrow to low and wide – can either be used on its own, or grouped with the others, to emphasise and define.

Solid material

Each shade is carefully crafted in solid die-cast aluminium, giving it weight and stability while acting as a heat sink. All shades are available in satin matte black or white. In 2024 we introduce an additional raw aluminium finish.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Small in size, big on light

The w201 Extra small pendant combines a COB LED, a reflector and a prismatic diffuser to create an unexpectedly generous spread of dimmable light.

Raw

w201 Extra small pendant is available in a raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Sam Hecht and Kim Colin

Sam Hecht and Kim Colin created their office Industrial Facility to apply a thoughtful consideration of form with a unique understanding of contemporary life, creating beauty out of utility in the products, furniture and exhibitions they design. Hecht, from London, trained as an industrial designer, while Colin, from Los Angeles, trained as an architect. With a roster of pioneering clients, including Muji and Herman Miller, they are regarded for their philosophical and pragmatic approach. They are both elected Royal Designers, an honour that recognises sustained design excellence with significant benefit to society. Works are held in most permanent collections, including the MoMA, NY; Centre Pompidou, Paris; and the V&A, London.

Beautiful light in multiple shapes and forms

Product: w162 Dalston

w162 Dalston takes its cue from lamps commonly found in workshops, inspired not only by the honesty and functionality that define their every aspect, but also their classic, unassuming character. Refining and updating this practical approach with advanced LED technology, w162 Dalston provides high-quality illumination without attracting too much attention – unless, of course, you want it to.

Building on these qualities, we introduce a new shade design – w162 Dalston s3 – in 2024. This new shade features an alternative graphic form: smaller, singular in material, consisting entirely of die-cast aluminum, and with a technical grace that is perfectly suited for smaller-scale illumination needs.

Design: Sam Hecht and Kim Colin, 2016

Features: Customisable system
Beautiful light
Minimal glare

Beautiful light

w162 Dalston's integrated COB LED light source, combined with a reflector and a prismatic diffuser, results in a light that is beautifully and evenly distributed over large surfaces.

Track compatible

Compatible with all major light track systems (see accessories page 408).

Customisable system

Building on the robust reliability of its predecessors, w162 Dalston features honest, durable materials and a clever construction. The die-cast aluminium LED engine – which doubles as a heat sink – attaches to the separate shade in spun or die-casted aluminium.

Palette of four colours

The LED engine comes in four colours, and can be paired with either of the three sizes of metal shades. In 2024 we introduce an additional tumbled raw aluminium finish.

Raw

w162 Dalston is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Minimal glare

Thanks to the LED engine's deeply recessed light source, w162 Dalston offers a highly efficient glare protection even when hung high.

Product: A pure disc of light
w182 Pastille

A pure disc of light, attached to a thin line. With its geometric approach, innovative materials and sophisticated mechanics, w182 Pastille offers not only high-end performance at a mid-range price – but also a new way of relating to the light around us.

Design: Sam Hecht and Kim Colin, 2018

Features: Wide distribution of qualitative light
Renewable and recyclable biopolyamide
Full-spectrum LED

Smooth rotation

By fluidly rotating upwards, downwards and around its own axis, w182 Pastille freely articulates surfaces to create soft, diffused light as well as gentle yet clear definition.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Attention to detail

Every detail has been given careful thought and is crafted with great precision – from the over-moulded metal parts and ultrasonic welding, to the dimmer button on the top of the vertical pole.

Wide spread of qualitative light

Thanks to a perfect balance between a COB LED light source, a large reflector and a generous concave diffuser, w182 Pastille provides a spread of warm, soft illumination. The smooth dimming is controlled with a touch of the button on top of the vertical pole.

Renewable and recyclable biopolyamide

The warm tactility of w182 Pastille comes from its renewable and recyclable high-performance material – a biopolyamide based on over 40% biologically sourced material from the castor plant.

Minimal footprint, maximal flexibility

w182 Pastille is adaptable to a variety of spatial conditions while taking up minimal space. In addition to the classic desk model, a wide range of mounting options allow it to be clamped to a desk or shelf, attached to a wall, placed on a floor, or integrated into a desk or wall surface with no visible cable.

Ilse Crawford

Ilse Crawford is a designer, academic and creative director with a mission to put human experience at the centre of her work. As founder of Studioilse, together with her multi-disciplinary, London-based team, she brings her philosophy to life. This means creating environments where humans feel comfortable; public spaces where people feel at home and homes that make sense for those who live in them. It means designing furniture and products that support and enhance human behaviour in everyday life; and selecting materials that have the least harm to people (makers and users) and our planet. It also means restoring the human balance in brands and businesses that have lost their way.

A universal light

Product: w203 Illumina

Shining in the dark like an illuminated manuscript, w203 Illumina is our update of the classic library lamp – drawing on innovative lighting technology while personifying our love of materials.

Design: Ilse Crawford, 2020

Features: Gentle light
Sliding potentiometer
Polished, brushed or matte

Polished, brushed or matte

While w203 Illumina's polished, high-shine copper surface reflects its library lamp heritage, it is also available in sober brushed aluminium and soft, matte eggshell white — each with its own beautifully unique finish.

Sliding potentiometer

w203 Illumina's smoothly sliding potentiometer makes dimming a tactile, enjoyable experience.

Gentle light

Whether used in the home or the office, w203 Illumina offers a warm, familiar ambience and directed light with clear yet gentle definition. With no visible light source to distract the eye, it allows its owner to fully enjoy the benefits of good light.

Raw

w203 Illumina is available in a brushed raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Product: Holocene No. 1: Ilse Crawford

Holocene No. 1 accentuates the simplicity and beauty of a single flame, surrounding it with a reflective pool of oil, thus allowing it to seemingly float. Contained within its generously sized concave disc of solid brass, this modern oil lamp is suitable for any surface, adding both atmosphere and reflective possibilities to its surroundings. Ideal as a complement to electrical light sources, or as a stand-alone accent for that natural, primal feel.

Design: Ilse Crawford, 2017

Product: Holocene No. 6: Ilse Crawford

Holocene No. 6 expresses the fluttering beauty of candlelight captured within an object. Its elegant solid brass concave disc features a high-gloss reflective finish and a wide flat lip at its edge. At the centre of the disc is a spike where a candle can be mounted. Ideal for any surface, this is a simple, accessible design, intended to create atmosphere while embracing the joy of human interaction.

Jasper Morrison Known for his “Super Normal” approach to design, Jasper Morrison looks to find the exceptional in the world of the ordinary. He is a firm believer that design should have an almost invisible presence in the end product and that an atmosphere of naturalness in things is more important than a designer’s signature. Born in London in 1959, Jasper studied design at Kingston Polytechnic, the Royal College of Art and Berlin’s HdK. In 1986 he opened his Office for Design in London, from where he continues to design furniture, lighting, tableware and everyday products. He has published several books with Lars Müller Publishers, including *A World Without Words*, *The Good Life*, *A Book of Things* and *Super Normal* (with Naoto Fukasawa). He has curated and participated in many exhibitions in Japan, the USA and across Europe. His work is represented in New York’s Museum of Modern Art and many other prominent collections around the world. His contribution to design has been recognised with membership of the Royal Designers for Industry, a CBE award in Britain and the Italian Compasso d’Oro award for his career.

Nendo

Design studio nendo was established by architect and designer Oki Sato in 2002. Based in Tokyo and Milan, nendo's work spans architecture, interiors, products and graphic design, and has won numerous international design awards, including Wallpaper* (UK) and ELLE DÉCOR magazines. Works by nendo can be found in the collections of museums around the world, including the MoMA in New York (USA), Centre Georges Pompidou (France) and the V&A (UK). Nendo is currently working on the design of the new TGV high-speed train for the 2024 Olympic Games in Paris, and is also responsible for the overall production and design of the Japanese Pavilion at the Osaka-Kansai Expo to be held in 2025.

Wästberg:

w132 Nendo

Page 207

Product: A system of carefully crafted parts
w132 Nendo

The core of the refined version of our highly appreciated w132 Nendo is a custom-developed LED engine of outstanding quality. By connecting various carefully crafted parts to it, the pleasant, comfortable light can be placed as either a table, floor or pendant lamp.

Design: Nendo, 2013

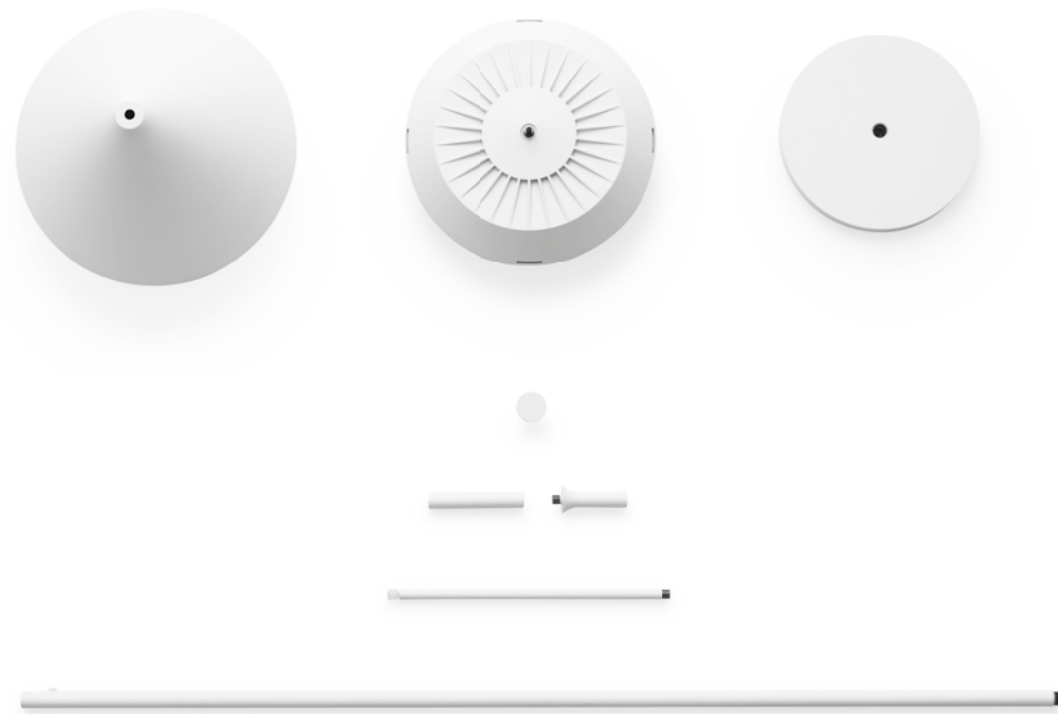

Features: Attention to detail
Highly qualitative LED engine
Smooth operator

System of parts

w132 Nendo can be transformed into different typologies; suspend it from the ceiling as a pendant lamp, or add a longer pole to the table version to turn it into a floor lamp.

Attention to detail

A lot of effort has been put into the making of every detail to convey an authentic sense of value, from the solid metal's sturdy elegance to the experience of the light.

Smooth operator

For greater versatility, both floor and table versions can be lowered and raised with a turn of the adjusting wheel.

Track compatible

Compatible with all major light track systems (see accessories page 409).

Highly qualitative LED engine

w132 Nendo features a custom-developed, die-cast aluminium LED engine that generates a pleasant, comfortable light. Its 30 SMD LEDs can be dimmed down from a powerful working light to a soft, atmospheric illumination.

John Pawson

John Pawson CBE has spent over thirty years making rigorously simple architecture that speaks of the fundamentals but is also modest in character. His body of work spans a broad range of scales and typologies, from private houses, sacred commissions, galleries, museums, hotels, ballet sets, yacht interiors and a bridge across a lake. As Alvar Aalto's bronze door handle has been characterised as the 'handshake of a building', so a sense of engaging with the essence of a philosophy of space through everything the eye sees or the hand touches is a defining aspect of Pawson's work. His method is to approach buildings and design commissions in precisely the same manner, on the basis that 'it's all architecture'. Whether at the scale of a monastery, a house, a saucepan or a ballet, everything is traceable back to a consistent set of preoccupations with mass, volume, surface, proportion, junction, geometry, repetition, light and ritual. In this way, even something as modest as a fork can become a vehicle for much broader ideas about how we live and what we value.

Page 223

Page 237

Quietly monumental

Product: w223 Pawson

John Pawson's design combines curved and rectilinear elements to create a quietly monumental volume. Notched cut-outs in the form contribute detail to the lamp's distinctive profile, while also serving the functional purpose of shaping the way the light is cast and creating an entry point for the cable. Each version explores a contrasting interaction of material and light – the lambent potential of marble and the reflective quality of aluminium.

Design: John Pawson, 2022

Features: Artisanal marble
Metallurgic mastery

Artisanal marble

Solid marble of the finest quality, skilfully crafted by artisans with profound experience and technical know-how, gives w223 Pawson remarkable heft and beauty. In itself, w223 Pawson is a stunning piece; once turned on, its light further enhances the marble's intrinsic luminosity.

Metallurgic mastery

The aluminium version of w223 Pawson is masterly and seamlessly crafted, featuring a striking, matte exterior and a hollow interior, for a fascinating play between shadows and reflections.

Product: Holocene No. 4: John Pawson

Pawson's design for Holocene No. 4 takes the notion of the oil lantern and meticulously reduces it to its essence in terms of function, form and palette, as a container for fire, with the means to carry or suspend. Crucible-like in profile, the lantern is fabricated in stainless steel and aluminium, with matte exterior surfaces and a polished internal core, to reflect and amplify the flame. The piece is designed for indoor and outdoor use and scaled to feel comfortable in a range of applications, singly or in groups, on the dining table or a windowsill, standing on the floor or hanging from a wall.

Ingegerd Råman

Born in Stockholm, Ingegerd Råman was trained under Carl Malmsten and later at the University College of Arts, Crafts and Design in Stockholm. In Faenza, Italy she studied ceramic chemistry. Råman has a successful career as a glass designer, initially at Johansfors and later Orrefors, where she became one of their most influential designers. Råman has been awarded the title of Professor by the Swedish government, and the Prince Eugen Medal by H.M. King Carl XVI Gustaf. She has also received the Excellent Swedish Design award on several occasions. Moreover, she has worked with the architect Gert Wingårdh on projects such as the Swedish Embassy in Washington and the Aula Medica building at the Karolinska Institute outside Stockholm. Today she is one of Sweden's best loved and most highly respected designers.

Wästberg:

Holocene No. 7

Page 243

Product: Holocene No. 7: Ingegerd Råman

Ever faithful to her habit of keeping a flower at her bedside, Råman explored different interpretations of the same concept between 1968 and 1995: a slim single-flower glass vase, with a clever reversible insert transforming it into a candleholder. All these years later, Holocene No. 7 revisits this concept, adding a polished steel base that echoes and amplifies the reflective qualities of the glass body.

Behind Holocene No. 7's apparent simplicity lies a meticulous attention to lines, proportions, and space. Its almost imperceptibly tapered body grants it a grace that is more sensed than noticed.

Design: Ingegerd Råman, 2022

Inga Sempé

French designer, born in Paris, Inga Sempé graduated from ENSCI-Les Ateliers (Ecole Nationale Supérieure de Création Industrielle, Paris) in 1993. She opened her own studio in 2000. In the beginning, she first collaborated with the Italian companies Cappellini and Edra. Now Sempé works among others with Scandinavian, Italian and French companies such as HAY, Ligne Roset, Wästberg, Magis, Alessi, LucePlan, Mutina, Iittala, Moustache, Svenskt Tenn, and Gärsnäs. She lives and works in Paris, assisted by two other designers.

Rethinking the clamp lamp

Product:

w153 Île

With w153 Île, Inga Sempé revisits the simple yet clever clamp lamps of her childhood, upgrading their status while adding stability, personality and multi-functionality.

Design:

Inga Sempé, 2015

Features:

Endless possibilities
Pared down and teched up
Full-spectrum LED

Pared down and teched up

While capturing the original clamp lamp's simplicity, w153 Île features refined technical solutions to meet contemporary needs. A COB LED emits a soft, warm white light, and a magnetic ball-joint construction allows for smooth, precise adjustment of the aluminium shade.

Endless possibilities

w153 Île shines brightly enough to be your bedside reading partner, as well as gladly playing a more decorative role, adding a dash of light and colour where needed. Its flat base allows it to stand confidently on its own, or to be mounted on a wall. And, of course, a clamp allows you to attach the lamp wherever you want it.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Colourful

w153 Île is available in seven colours.

A phantomic silhouette of light

Product: w163 Lampyre

Taking its name from the French word for glow-worm, w163 Lampyre consists entirely of soft, soothing light behind white mouth-blown opal glass. Even at its brightest, it is a pleasure to look at; dimmed down, it is perhaps at its most beautiful, glowing phantom-like from base to top.

Design: Inga Sempé, 2016

Features: Mouth-blown opal glass
Soothing light
Two sizes

Mouth-blown opal glass

w163 Lampyre consists of two parts – a base and a shade, made of carefully mouth-blown matte glass and combined into a single entity of soft, dimmable glow when lit.

Soothing light

With its gentle, reassuring light, w163 Lampyre provides a comforting and familiar touch to any interior – a modern-day fire.

Two sizes

w163 Lampyre is available in two sizes, where the larger version makes an ideal solitary piece, able to change the atmosphere in a room all by itself. The smaller version is the perfect detail for a bookshelf, nightstand or perhaps a window, where it can shine its friendly light down onto the evening streets.

Product:

Durable elegance

w103 Sempé

As simple and solid as a pushpin, this versatile lamp combines weight and lightness in one balanced piece that continues to stand the test of time – in both usage and aesthetics. w103 Sempé has been refined and upgraded with new lighting and mechanical solutions as well as a new colour palette.

Design:

Inga Sempé, 2010

Features:

Sturdy and flexible
A palette of six colours
Stellar lighting technology

Sturdy and flexible

Inspired by traditional machine-tool lighting, w103 Sempé features sturdy, long-lasting mechanics, great versatility and beautiful light. The table version's solid base provides heft and stability, elegantly counterbalanced by the delicate aluminium shade and the slender steel arm. With three different positioning angles and an adjustable shade, w103 Sempé is an adaptable lamp for any environment.

Linear constellation

In the pendant version, the cleat on the table lamp's base has been placed on the top of the shade, creating a connection point for a linear constellation.

Stellar lighting technology

All three versions share the same custom-developed, dimmable SMD LED engine – for beautiful, adaptable, high-performance light.

Track compatible

Compatible with all major light track systems (see accessories page 409).

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Base or clamp

w103 Sempé is available with a base or clamp, both featuring a cleat for winding up excess cable.

A palette of six colours

The w103 Sempé pendant lamp offers a choice of six different colours: Traffic white, Poppy red, Light yellow, Grey brown, Slate blue and Jet black.

Tham & Videgård

Tham & Videgård are based in Stockholm, Sweden, and directed by co-founders and lead architects Bolle Tham (b. 1970) and Martin Videgård (b. 1968). Since the start in 1999 the practice has attracted attention for its many innovative built works. Tham & Videgård's projects have won several national and international awards and twice the Kasper Salin Prize in 2008 and 2015 for best new architecture in Sweden. Tham & Videgård has also gained opportunities to work abroad, currently with ongoing projects in Paris, Prague and Spain, and is regularly invited to participate in international exhibitions such as the Venice Architecture Biennales, The Chicago Architecture Biennial, the Victoria & Albert Museum and at the Louisiana Museum of Modern Art. Bolle Tham and Martin Videgård are members of the Royal Academy of Arts and regularly teach and lecture in Sweden and abroad.

w171 Alma

Page 295

Sculptural shadow play

Product: w171 Alma

Based on the graceful curve of a rotated sine wave, w171 Alma is discreet yet fascinating with its sculptural feel and soft contrasts between light and shadow.

Design: Tham & Videgård, 2017

Features: Slim silhouette
Solitary – or a floating ceiling

Slim silhouette

With its slender proportions, w171 Alma takes up little visual space, making it an ideal lighting solution for areas with low ceilings.

Solitary – or a floating ceiling

Suspended from the ceiling, it performs beautifully both solitary as well as in a group – even to create an entire floating ceiling of light.

Craftsmanship

Behind the deceptively simple curves lies real craftsmanship, using artfully formed aluminium to capture the smooth waves. The satin matte finish makes w171 Alma intriguing even in daylight, with its concentric circles of shadow and light. In 2024 we introduce an additional raw aluminium finish.

Track compatible

Compatible with all major light track systems (see accessories page 409).

Raw

w171 Alma is available in a raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Dirk Winkel

Dirk Winkel is a Berlin-based product designer who graduated from the Royal College of Art London, MA Design Products in 2010. Specialized in lighting and furniture design, he set up his design office in Berlin in summer 2011. Driven by the idea of formal purism as a basic principle of sustainability, his great interests are the exploration of pushing the boundaries of mass production techniques, the rethinking of light and lighting paradigms, and the investigation of new materials and their ecological and design potential. Since 2012 he has been teaching Design Construction at the Industrial Design course of the UdK Berlin. In 2022, he was appointed guest professor for product design at the HBKsaar. His work has won numerous awards and nominations like the Swedish Design Award (Svensk Form), Designs of the Year (London Design Museum), the German Design Award (Special Mention) and the Editors' Choice Award (Stockholm Furniture & Light Fair).

Vast illumination

Product: w164 Alto

Indirect light is a classic ambient lighting technique. By focusing on exceptional light distribution, w164 Alto offers a new, dynamic solution for agile office environments as well as intimacy and atmosphere in the home.

Design: Dirk Winkel, 2016

Features: Super-wide-angle light
Agile ambience
Dimming wheel

Architectural approach

Pared down to the absolute bare basics – two cylindrical units, paired in an off-centre constellation – w164 Alto makes a bold, graphic statement with its brutalist, deconstructionist architectural references.

Super-wide-angle light

The light pole houses a sophisticated 4459 lumen multi-directional LED technology with an impressively even, super-wide-angle light distribution. w164 Alto works well even in rooms with low ceilings, making it an ideal alternative to conventional general lighting.

Agile ambience

With its small footprint and simple plug-and-play functionality, w164 Alto is easily adaptable to shifting environments, preferences and needs.

Dimming wheel

The top disc of the base is an integrated dimming wheel and switch. The teeth from the rotation plate interrupt the IR signal at the light barriers, allowing a seamless transition from powerful yet friendly general lighting to a more intimate atmosphere.

Vast illumination

w224 Alto pendant

w224 Alto pendant is the epitome of purism: a small cylindrical body – a pendant in its most reduced form – boasting an impressive indirect light, capable of filling a whole room with soft, balanced illumination.

Based on the brutalist-inspired aesthetics and dimensions of the w164 Alto floor lamp but even more powerful, its design is defined by its central, artfully engineered heat sink. And like its predecessor, w224 Alto pendant provides unparalleled light.

Design:

Dirk Winkel, 2022

Features:

Form follows function
Powerful, super-wide-angle light

Powerful, super-wide-angle light

w224 Alto pendant's multi-directional LED technology creates an incredibly wide-angle, even light distribution – a great alternative to conventional general lighting. Four powerful COBs provide a generous, indirect light of 11000 lm – brilliant enough to illuminate a large room, but also dimmable for a more atmospheric ambience.

Highly versatile

w224 Alto pendant is available with a ceiling mounted or recessed canopy. The suspension rod is available in two maximum lengths: 1200 mm or 2500 mm. Both options can easily be cut to adjust for shorter lengths.

Raw

w224 Alto pendant is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Form follows function

The central element of w224 Alto pendant is its distinctive heat sink. Crafted from a single piece of solid die-cast aluminium, its geometric arrangement of vertical pins allows for effective thermal management.

Fluid precision

Product: w225 Ion

Don't let w225 Ion's delicate lines deceive you: This is the ultimate result of research, a journey into light technology and mechanical engineering. Behind its understated lines lies a beautifully configurable system of light. Its mechanics centre around a highly sophisticated miniature friction joint with cordless power connection, allowing 360° rotation. From wide-angle workspace illumination to focused bedside reading light, w225 Ion is truly designed for versatility – while offering light that is nothing short of exceptional.

Design: Dirk Winkel, 2022

Features: Exceptional light
Cordless 360° joint
Endless possibilities
Two angles of light
Full-spectrum LED

Exceptional light

The lighting technology in w225 Ion is the result of a perfect balance between several ingenious components, each playing its own role in delivering exceptionally high-performance illumination. The state-of-the-art-full-spectrum COB LED provides absolutely stunning light further refined by a high-quality lens. A sophisticated heat management system and effective glare protection optimise the lifespan and performance of the LED, while allowing for comfortable use.

A choice of two colour temperatures

The light is available in two different colour temperatures – 2700 K or 3000 K.

2700 K
3000 K

Two angles of light

Available in two different optical systems, depending on the light you want to create: wide and even, or narrow with a clear-cut spotlight definition.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Cordless 360° joint

The core of w225 Ion's mechanical design is its miniature friction joint, the result of dedicated research and development. While akin to the joints used in modern laptops, this solution features a much wider movement range of 360°. Solidly built, it allows for fluid yet exact positioning at any angle – and then stays put, even after countless readjustments.

Raw

w225 Ion is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Endless possibilities

A choice of arms in two different lengths, combined with various mounting options, allows for a wide range of lighting possibilities. Task light or reading light, floor lamp or wall mounted – it's all up to you. All elements are available in black or white. In 2024 we introduce an additional tumbled raw aluminium finish for some versions.

A linear spotlight

Product: w181 Linier

At first glance, the w181 Linier resembles a linear pendant lamp. However, a closer look at its geometrically strict body reveals that there's more to it than meets the eye.

Design: Dirk Winkel, 2018

Features: Precisely defined light
Glare-free light
Versatile, integrated dimming

w181 Linier

Precisely defined light

A series of 256 deep-recessed individual optical systems, packed ultra-tight, provides a crisp directed light.

A choice of three colour temperatures

Depending on your particular needs, w181 Linier is available in three different colour temperatures – 2700 K, 3000 K or 4000 K.

2700 K
 3000 K
 4000 K

Glare-free light

Separate anti-glare compartments guarantee a comfortable, glare-free light with a low UGR (unified glare rating).

Precise engineering

A lot of effort has been put into the precision engineering of w181 Linier's sleek black aluminium body. For example, w181 Linier is suspended at its Bessel points to create perfect balance and stability in relation to its long, slender proportions.

Versatile, integrated dimming

For a smoother user experience, w181 Linier is available with integrated dimming wheels at both ends; each can be turned independently to set the desired light level, allowing for optimal adaptability.

w181 Linier pro

High efficacy

w181 Linier Pro features integrated microlenses that deliver the same sharp, focused illumination as the standard version, but with an enhanced level of efficacy (136 lm/W).

Workplace light

Separate anti-glare compartments guarantee a comfortable, glare-free light with $UGR \leq 19$ (unified glare rating) and $\text{candela/m}^2 \leq 3000$. w181 Linier pro complies with the DIN EN 12464-1 standard.

The ultimate task light

Product: w127 Winkel

w127 Winkel is designed to provide the best possible task light. Today, it is our flagship product, our most award-winning and best-selling task light, a favourite among many renowned architects – and with good reason. We spent over three years developing what we consider to be the most refined task light ever seen: a sublime unity of parts, where every design choice is based on providing light that is nothing less than perfect.

Design: Dirk Winkel, 2012

Features: High-performance light
Renewable and recyclable biopolyamide
Efficient glare protection
Full-spectrum LED

High-performance light

w127 Winkel's entire concept is built on providing state-of-the-art light, and in this, it truly excels. Built around a COB LED, it is a well-thought-through, precisely engineered lighting solution in a system of several individual components. Each of these plays its own vital role in delivering a generous yet incredibly even spread of high-quality, dimmable light over a large surface. Thanks to the biopolyamide material's heat insulating qualities, paired with a sophisticated heat management system, powerful light can be combined with safe handling and a long lifespan.

Renewable and recyclable biopolyamide

Together with German chemical company BASF, we've created a product with no compromise on quality, the environment or tactility. A high-performance recyclable biopolyamide material – based on over 60% biologically sourced material from the castor plant – provides all the advantages of plastic, while minimising its disadvantages.

Versatile mounting

The w127 Winkel family is designed for maximum versatility, with several mounting options – table, clamp, pin – as well as a range of adapters for integration with table systems from various furniture manufacturers.

Advanced mechanics with nothing to hide

w127 Winkel's arms are pure, solid biopolyamide, with the power cord and micro-spring attached to their exterior, fully visible; this well-planned arm and joint construction provides stability and flexibility, all the way from shade to table mount. We see the design as a celebration of this material – straightforward, solid and honest, with no second skin, no coat of paint, and nothing to hide.

Efficient glare protection

w127 Winkel features an effective anti-glare construction that guarantees glare protection without significant loss of light.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

The ultimate task light, evolved

Product: w227 Winkel alu

For the 10-year anniversary of w127 Winkel, we presented w227 Winkel alu: the evolution of our bestselling task light, that takes its bold design to a new level, it has been completely re-engineered with one clear goal: to get more out of less. Now based on aluminium, this next-generation task light uses significantly less material and features new, slimmer arm profiles and joints, an extended movement range and an evolved light technology. With its unique and exceptional performance, w227 Winkel alu truly redefines state-of-the-art, high-end task lighting.

Design: Dirk Winkel, 2022

Features: Less is more
High-performance light
Efficient glare protection
Recycled and recyclable aluminium
Full-spectrum LED

Efficient glare protection

w227 Winkel alu features an effective anti-glare construction that prevents glare without any significant light loss.

Full-spectrum LED

Designed to recreate the full, uninterrupted colour spectrum of sunlight, full-spectrum light has a rich, profound quality that is impossible to achieve with the limited spectrum of a standard LED. Full-spectrum light also offers superior colour rendering, making it an ideal choice for environments where correct colour perception is a vital aspect.

Recycled and recyclable aluminium

Not only is aluminium a tried-and-tested, classic and infinitely recyclable material – its strength and lightness allow for robust, resource-efficient constructions. w227 Winkel alu consists of partly recycled aluminium, which itself can be recycled at the end of its long lifespan.

Adapts effortlessly

Designed to adapt seamlessly to modern working environments, w227 Winkel alu offers two mounting options – table or pin – and is available in both white and black. In 2024 we introduce an additional tumbled raw aluminium finish.

High-performance light

w227 Winkel alu's entire concept is built on providing state-of-the-art light, and in this, it truly excels. Built around a COB LED, it is a well-thought-through, precisely engineered lighting solution in a system of several individual components. Each of these plays its own vital role in delivering a generous yet incredibly even spread of high-quality, dimmable light over a large surface.

Raw

w227 Winkel alu is available in a tumbled raw aluminium finish, with no added coatings or protective treatments. This allows for resource-efficient production, easier recycling, and a graceful ageing process. Already from the start, its naturally textured surface, that may show imperfections from the production process, has a rich, tactile depth; over time, marks, stains, fingerprints, and oxidation will evolve into a beautiful, distinctive patina.

Less is more

w227 Winkel alu delivers even more pared-down dimensions and aesthetics than its predecessor, while surpassing it in flexibility. Designed to require as little material as possible, its slender arms and joints are now hollow, allowing previously visible cables and springs to be concealed.

Modern day
fires by you.

We develop our lamps to provide you with the best possible measurable qualities of light.

We also develop our lamps to provide you with all the immeasurable qualities of a modern-day fire. We want them to be close to you. We want them to shine for you, not on you. And we want you to use them, any way you need.

But we also want to help you find new ways of using them. So, we created Modern-day fires by you – a concept where we share our customers' most interesting, innovative and inspiring projects.

We add to it every Friday through our Instagram account @wastberglighting, which we hope you already follow. You'll find the entire collection on our website, or by scanning the QR code below.
